

A System Integration Solution

Introducing a new **High Impact Colored Acrylic** finish to our ever popular Modular Panel System (MPS) panels.

This new finish provides a strong, clear and durable non-glare surface coating that protects the core color of your choice while resisting to the rigors of everyday use. In addition to the basic colors of Black, Red and Blue, shown below, we can supply the panels in: Yellow, Green, Brown, Grey, Gold, Silver, Graphite and White, to meet your clients every need.

Each panel comprises a 0.031" Acrylic face which is bonded to a black anodized aircraft grade 1/8" aluminum base plate to support the connectors and controls of your choice. Overall thickness of the 2-Ply panel is 0.156" (5/32")

Just like our regular MPS panels, these panels can be supplied with or without the connector(s) and / or control(s) of your choice and engraved to your specification. (Different ink colors are used to contrast the base color for best identification)

For those of you who use our Tiebars (cable strain relief brackets) these panels, unlike our regular MPS panels, do not use a through-the-panel screw but rather a 6-32 threaded mounting hole on the rear of the panel to attach the Tiebar. This means that when not using a Tiebar, additional space becomes available for more connectors / controls on the panel.

Note: This finish can be applied to all our SPS (19" Rack Panels) and CPS (Custom Panels) products.
