

# System Integration Solution

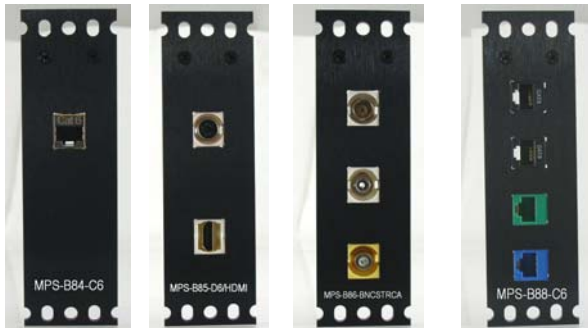

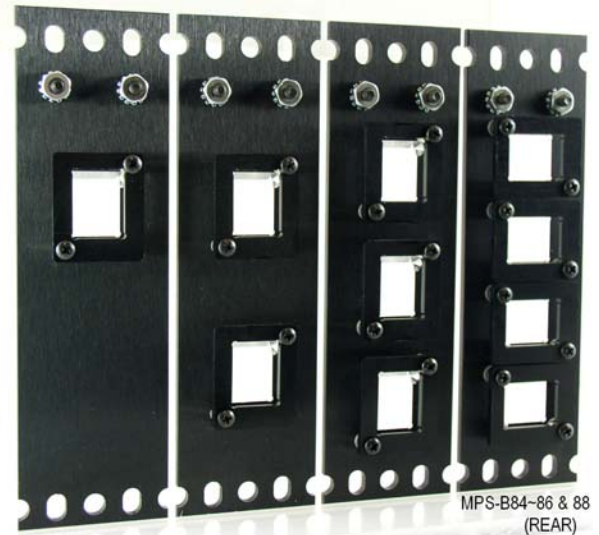

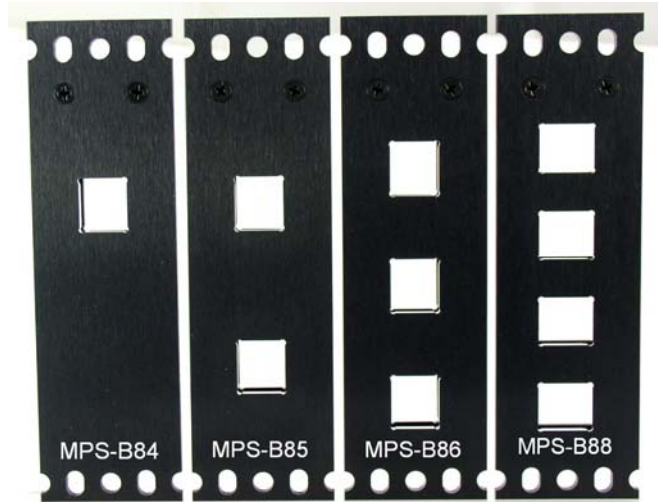

**Introducing a new series of “B” size panels to support “Keystone” style connectors.**

The four panels in the series will accept industry standard Keystone style connectors via a metal bracket mounted on the rear of the panel. This bracket provides a rigid and sturdy platform that assures a stable and reliable mounting fixture.

Using these panels allows the Keystone connectors to be terminated before insertion into the panel, saving you time.

The broad range of connector, available from many manufactures, support both copper and fiber for signal and/or control applications, means you can mix and match these in a single panel. This flexibility extends to future upgrades or functions simply by switching out the keystone connector for another version, for example a CAT5e to a CAT6 or something else.

Below are several examples using these panels.

Like all our other MPS panels, they can be supplied with or without connectors and engraved to your specification.

For those of you who are looking for a small version of MPS be sure and visit our new website [www.mps-lite.com](http://www.mps-lite.com) for our 2RU (3.50" Tall) modular system.

Visit our website - [www.signt.com](http://www.signt.com) - or give us a call at Ph: (714) 641-5665 for information and pricing on all of our products. Thanks.
