

**MPS-A75:** Adding a new "A" size panel to our already extensive offering. This panel have been designed to accommodate up to (4) Keystone style connectors with the connector(s) mounting into the rear of the panel. This configuration offers a great deal of flexibility as the Keystone form factors support both copper and fiber termination. This means you can mix and match what the type of signal you need terminated at the panel. The MPS-A75 can be supplied with or without connectors to meet your requirement. Picture to the right shows and panel with RJ45 CAT6 Shielded bulkhead / feed-through installed and a non-populated panel.

**MPS-A71~74:** Adding a new set of "A" size panels, MPS-A71, MPS-A72, MPS-A73 & MPS-A74 to support 1 through 4 SC (simplex) and/or LC (duplex) fiber couplers. These types of fiber couplers can be mixed and supplied as either Single-mode or Multi-mode. The LC version can be supplied with or without internal shutters. The (2) pictures below shows a panel populated with 4 LC Multi-mode with internal shutters installed, front and rear view. What differentiates this set of panels from

others supporting Fiber termination, is, here the connectors are recessed so that only 1/8", of the actual connectors, protrude through the front of the panel. This provides protection for the termination and a more attractive finish. The picture below shows the (4) panels with connectors.

As is the case with all of our MPS panels, they can be supplied engraved with text unique for your application.
