

System Integration Solution

Introducing a new version of our popular 19" Rack Adapter – **MPS-RACK1-SD**

The **Swing Down (-SD)** 19" Rack Adapter has been designed so that after loosening 2 captive knurled thumb screws, one on each side, the modular panel assembly can be swung forward and down to expose the rear of the panels to ease cable termination and future maintenance.

Mounting of the unit is achieved by using two 10-32 screws and plastic washers for the lower mounting points, and the two captive thumb screws for the upper mounting points. The two lower mounting screws also anchor the complete assembly when the modular panel sub-assembly is hinged forward and down. The rotation of the modular sub-assembly is restricted to 125 degree to avoid the possibility of damage to the equipment located directly below the rack adapter. Fabricated from 1/8" aluminum plate that has been painted with a black textured powder coat to withstand the rigors of real world usage and provide an attractive finish.

Also available as a conversion kit (MPS-SD-KIT) for existing 19" Rack Adapters (MPS-RACK1). Simply replace the existing left and right Rack-Ears with the Swing Down version, the existing modular mounting extrusions and label strips continue to be used in the new Swing Down assembly.

Another new product in our endeavor to make installation and service easier and more efficient.
