

# System Integration Solutions

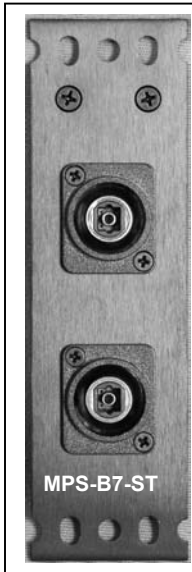

**MPS-A9, A14, A15, A23 & A25:** A new use for these popular "A" size panels. Install our new 4-pin, 6-pin or 8-pin Mini-DIN female to female bulkhead connectors. Ideal for S-video, computer keyboards / mice and instrumentation.

The connector is machined from brass, then nickel plated for appearance and corrosion resistance, and then fitted with gold plated contacts for long term reliability. The part number for the connectorized panels will have a "-MD4", "-MD6", or "-MD8" extension to denote which connector is installed.

**ST-TL-1:** Introducing our new **Toslink**, female to female, bulkhead connector with an insertion loss of less than 1dB. This connector has the same mounting pattern as the popular XLR panel mount connectors from Neutrick, "D" Series, and "E" Series from Switchcraft. They can be in-

stalled in all of our "XLR" panels: MPS-B14, MPS-B7, MPS-B27, and MPS-C3. In each case, the part number for the connectorized panel will have a "-TL" extension to denote the Toslink connector. Remember, Toslink connectors, originally designed for the consumer electronics industry, does not have the same precision as ST, SC, FC, or LC connectors, so care should be taken to minimize losses. This can be done minimum (4) and the use quality fiber cables. With this addition we now offer bulkhead adapters, loose or installed in panels, for: USB, Firewire, Mini-DIN (4, 6 or 8), RCA and Fiber. (ST, SC, FC, LC and Toslink)
