

A System Integration Solution

MPS-B61, B62, B63 & B65: A new set of “B” size panels designed to accept 1, 2, 3 or 4 standard snap-in Keystone connectors. Connectors available from many different sources and configurations ranging from bulk-head feed-through’s to punch-downs.

The key is the use of our new universal adapter collar **MPS-UAC-B** (black) or **MPS-UAC-W** (white). These plastic adapters provide the perfect transition between

snap-in Keystone connector and panel. Blanks in black or white are also available when short-loading a panel.

Expanding our **Standard Panel System** product range with the new **SPS-19-1RU-TB**. This 19” by 1RU panel is supplied with a cable Tiebar mounted on the back and a recessed label strip / Lexan lens installed in the front. Standard panel is made from 3/16” aluminum (6061) which is brushed and anodized black ready to be machined to accommodate whatever controls and / or connector(s) that will fit the space available.

Shown below, together with a standard blank panel, is one machined with 16 Universal XLR cutouts to accommodate our XLR-DB9/HB15 and XLR-LC Duplex connectors in addition to the regular D and E series XLR’s from Neutrik and Switchcraft.
