

A System Integration Solution

Introducing a new Standard Panel System product, **SPS-19" Rack Panels**. This new product give you the option of offering your clients EIA compatible 19" rack panels fabricated from 1/8" Aluminum or from one of our Composite materials. The Composite panels are formed with a top and bottom flange while the Aluminum panels have a pair of support

rails attached to the rear for strength and rigidity. All Rack Panels are available in 1RU, 2RU, 3RU, 4RU and 5RU height. Finishes ranging from brushed and black anodized for the Aluminum panels to matte black, white, silver or brushed silver for the Composites panels. The Rack Panels can be supplied blank, blank with machined cutouts for connectors and/or controls; blanks with machined cutouts for connectors and/or controls and engraving or complete with connectors and/or controls and engraving to your specifications.

Introducing another new Standard Panel System product line, **SPS-Gang Panels**. This product line allows you to offer your clients custom connector and/or control interface panels that attach to industry standard 1-Gang to 5-Gang wall boxes, larger sizes can be supplied but not off-the-

shelf. The panels are fabricated from 1/8" Aluminum which are brushed and black anodized ready to be machined and/or engraved to your specification. The panels are supplied as blanks or blanks with cutouts for connector and/or controls, or complete with connectors and/or controls and engraving to your specifications. Please remember the space available is determined by the internal dimension of the electrical Ganged box mounted behind the panel.

We have recently supplied several of these Ganged Panels fabricated from our

Composite material in matte white, black and silver. When using this material the beveled edge exposes the black core material plus the top aluminum layer, the visual effect is not unattractive as that panel looks like it has a frame around it.
