

Introducing 2 new AV (Audio/Video/Data) Adapter Plates for our MPS-Lite series of connector panels, **L-MPS-AV26** and **L-MPS-AV26-F**.

Both the **AV-26** and **AV26-F** have been designed to be installed to the front of a 17.42" x 11" Peerless IBA2AC box. The **AV26** is used when the Enclosure has been Surface Mounted and the **AV26-F** (Flush version) is used when the Enclosure has been installed In-The-Wall, behind the sheetrock.

Both **Adapter Plates** support 2 rows of 13**MU** for a total of 26 per **Adapter Plate**. The **MPS-Lite** Module Units (**MU**=0.905") can be made up of any combination of A (1**MU**), B (2**MU**) or C (3**MU**) size panels with or without connectors or engraving.

After the 17.42" x 11" Peerless IBA2AC box has been installed, the *lift-off* cover is replaced by either the **AV26** or **AV26-F Adapter Plate**, depending on the type of installation. The **AV26 Adapter Plate** is the same size as the enclosure, and fits without any overlap for a Surface Mount Installation.

The **AV26-F Adapter Plate** is slightly larger than 17.42" x 11" which allows for an overlap of the Peerless IBA2AC box enclosure to cover the cutout in the sheetrock for clean in wall Installations.

Each **Adapter Plate** is comprised of 3 parts. The Base Plate, a formed plate that can accommodate (2) rows of 13**MU**'s, (2) Label End Stops that are attached to the Base Plate and then a Face Plate, installed over the Base Plate and Label End Stops, that collectively attached to the front face of the enclosure via 4 screws and provides the platform for the installation of our wide range of **MPS-Lite** modular panels. Email sales@sigt.com for custom patch panel cuts.

Each **Adapter Plate** is also supplied with (4) Label Strips that cover the **MPS-Lite** modular panels mounting screws and help identify the panel / connector function for the user. This results in a clean professional interface that can easily be upgraded to meet the demands of tomorrow. (Example layout, top of page)

The **Adapter Plate** assembly is supplied with a brushed aluminum anodized Black finish. Custom powdered coated panels are also available. Send us an email at sales@sigt.com for a quote! You can also email your request for the AutoCAD library to do your own layout using the embedded blocks for this **AV** product or our Rack and Wall Plate Adapters, plus a wide selection of **MPS-Lite** modular connector panels.
